

# Webinar event on migratory fish in the Tamar catchment

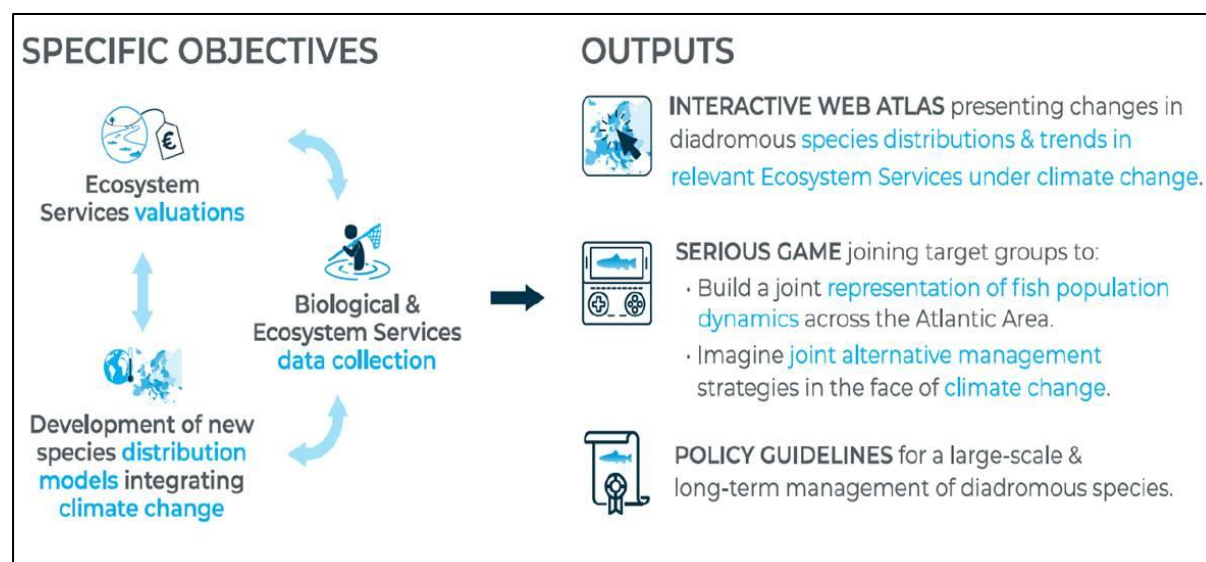

The River Trust, Cefas and Plymouth University are hosting a free webinar on migratory (diadromous) fish in the River Tamar catchment. Sign up here to attend the free event.

The River Trust, Cefas and Plymouth University are hosting a free webinar on migratory (diadromous) fish in the River Tamar catchment. The webinar will outline the work of the 'DiadES' project, which is researching the role of fish species including lamprey, eels, salmonids, mullet and flounder, their biology and importance to humans, and how they may be affected by climate change.

The hosts are keen to engage with local stakeholders, so this is an excellent opportunity to get involved.

The webinar is taking place at 10:00 – 11:00 on Wednesday 15<sup>th</sup> July. More details, and a link to register for the webinar are available here: <https://www.eventbrite.co.uk/e/introducing-diades-tamar-river-catchment-tickets-110297476722> and on the event flyer.

D&S IFCA has no direct involvement beyond helping to inform those that may be interested.

## More Information

If you are interested in the Environment & Research work undertaken by D&S IFCA, we have a selection of Environment & Research display pages on the D&S IFCA Website which can be viewed [here](#). Further information and reports produced by D&S IFCA's Environment Officers can be viewed in [Section H of the Website Resource Library](#).
